My Devices: Quiz

Source:
The SecDev Foundation

1. How often do you need to update your applications to stay safe online?

- Once a day
- Once a week
- Once a month
- As soon as updates are available

2. Which of the statements below is NOT true?

- Software updates include patches that cover the latest security vulnerabilities.
- Using pirated software means possibly leaving a door into your devices, data and correspondence permanently open to prying eyes.
- I do not have to worry about software updates when I have full-disk encryption enabled and antivirus running on my device
- Software should only be downloaded and installed from sources you trust

3. How often do you need to turn on your antivirus to stay safe from digital threats?

- Your antivirus should always be on
- Once a day is enough
- As many times as you connect external devices to your computer
- Once a week is enough

4. Why do you need to lock your computer screen every time you step away?

- Screen lock saves energy when you are not using your device
- Screen lock prevents hackers from gaining control of your device
- Screen lock prevents others from using or viewing your device when you are away
- All of the above

5. Which questions should you ask yourself before installing a new app on your smartphone?

- Do I really need this app?
- Is the app from a trusted source?
- Am I comfortable with giving this app all these permissions?
- All of the above
